Your Experts for Aviation and Tourism Software

IATA | Strategic Partner

Airports

Next-generation airport management – 100% web-based

Dedicated to airport success since 1987, we provide solutions for air traffic, aeronautical billing, ground handling, reporting, cargo and CDM – all from a single source. With our airport management solution SKYport you get more than just software – we also consider your business processes and integration, and even improve your passengers' experience with multimedia FIDS applications running on single-board computers.

Air Traffic Control

More than 15 years' experience in ATC projects worldwide

Benefit from our extensive know-how in Air Traffic Management, which includes system integration and interfacing as well as individual software development, ranging from requirement analysis and customer-specific solutions to state-of-the-art technology. We also adapt third-party products through customization and integration with existing infrastructure.

ISO's proven aeronautical billing solutions can also support Aeronautical Navigational Facilities Charging. Based on a flight plan interface, en-route and overflight charges can be calculated automatically.

Ground Handlers/FBOs
From apron to accounting – is all your extra work invoiced?

An estimated 20% of all additional services provided by ground handlers and FBOs are never invoiced – either because these services are not put down on a worksheet, or because the worksheet never reaches the accounting department. With more than 25 years of experience in aviation charges and ground handling contracts, we can help you streamline your process.

Airlines
Your choice for M-Billing and Revenue Accounting – SKYfly

Sustained success and healthy growth require a low-cost base, which is best achieved by improving efficiency. ISO's solutions let you do this through extensive automation, built-in validations (for work by exception), and top usability. All applications use standard formats and a similar layout, yet are flexible enough for both legacy and hybrid carriers – for M-Billing and Revenue Accounting, hosted or in-house, including agency invoicing, charter invoicing, payment reconciliation and KPI dashboard.

Tourism

Boost your sales with additional tourism products

With more than 30 years of developing software for tourism and carrying out according projects in more than 30 countries worldwide, we know every niche of the business. Whether incoming, outgoing, dynamic packaging or CRM – our software lets you automate scores of internal processes. This avoids errors and media breaks, reduces your process costs and shortens response times.

ISO-Gruppe

Three decades of aviation & tourism software

ISO has been active in the market since 1979 and has become an international IT service provider. The focus on specific markets has resulted in several powerful and innovative companies under the umbrella of the ISO-Gruppe, spanning the industries from Aviation to Tourism – and everything in between.
